Specialty Director, Infectious Diseases

COVID-19 Testing Q&A

Questions

1-2 of 8

Large national laboratories have said their testing capacity is coming under strain with the surge in COVID-19 cases.

- How will that impact our ability to access testing in our community?
- What is Atrium Health doing to ensure testing is accessible moving forward?

Questions

3 of 8

Last week, NC announced a new statewide standing order that eliminates the need for COVID-19 testing sites to require a provider referral for testing.

- What does that mean for Atrium Health?

Questions

4-5 of 8

- If an employee had COVID-19 or was exposed to someone with COVID-19, should a negative test result be required for the employee to return to work?
-
- Similarly, would requiring **two** negative test results to return to work following a COVID-19 infection be considered best practice?

Questions

6 of 8

- Are the number of COVID-19 cases truly rising or do they just appear to be rising due to increased testing?

Questions

7 of 8

- As employers work to bring employees back into the physical workplace, is it recommended or reasonable to require a negative COVID-19 test from each employee in order for them to return to work?

Questions

8 of 8

- What are your thoughts on the point-of-care diagnostic tests that are currently available for COVID-19?

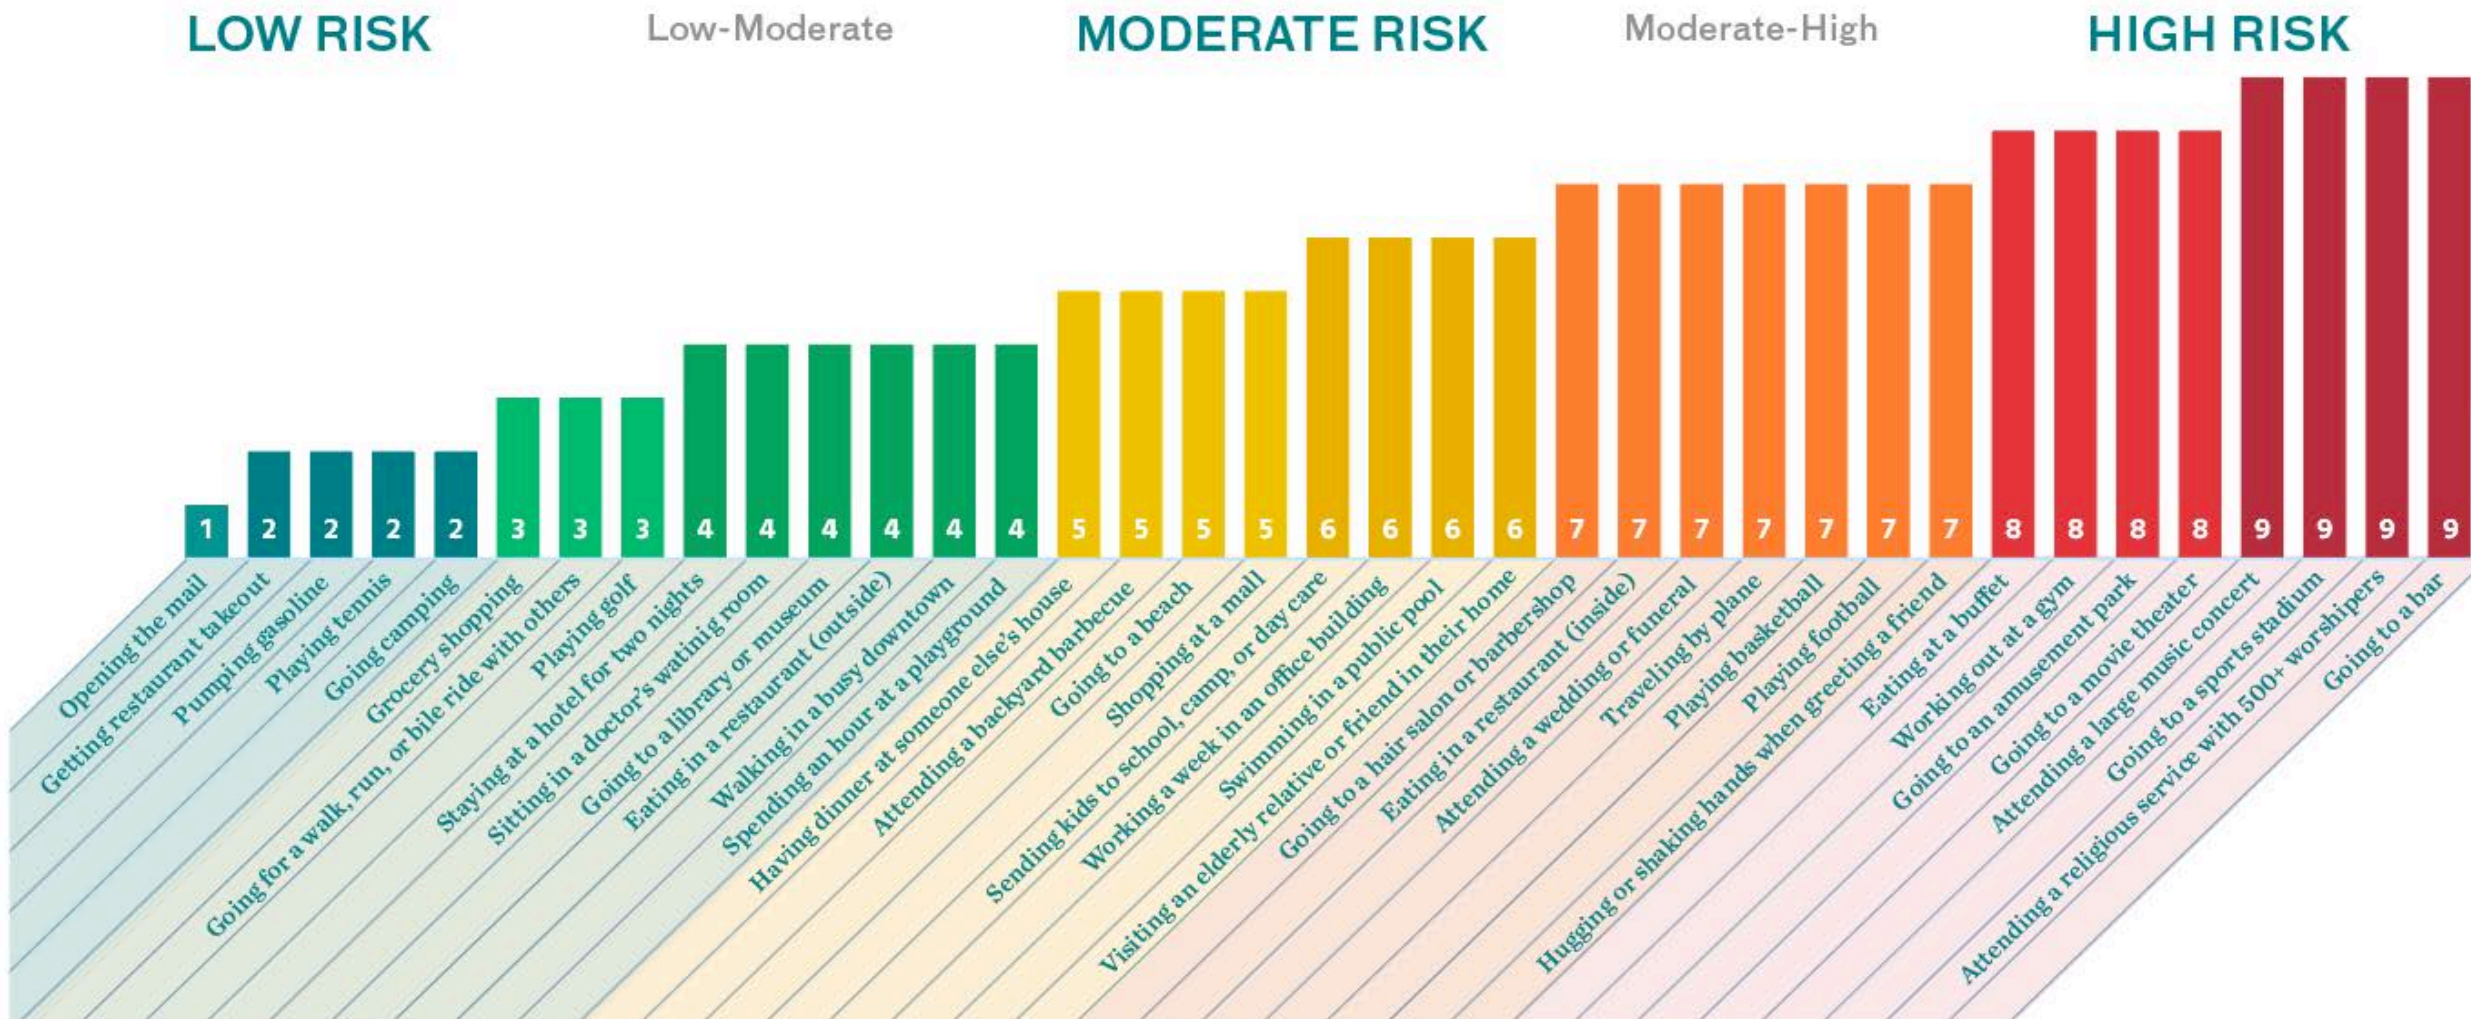

04

Ruth Krystopolski, MBA

Senior Vice President, Population Health

***Risk Levels by Activity & Update on
New Services***

Know Your Risk During COVID-19

On-Site Post-Exposure Testing

Provides COVID-19 diagnostic testing for asymptomatic employees following a worksite exposure.

- Testing is conveniently delivered at the worksite, eliminating access barriers
- Specimens are collected with a less invasive nasal swab technique
- Employers will receive a report with all test results following the testing event
