How masks help protect us from spreading and catching coronavirus.

Coronavirus is spread in droplets. Masks help block droplets.

How to wear a face mask

• Wash or sanitize your hands before putting on your mask

• Make sure your mask covers your nose and mouth. Teachers will let you know when you do not need to wear a mask.

• Try to fit your mask snugly against the sides of your face

• Be sure you can breathe

• Take off your mask by holding the ear loops or ties

Wear a mask. Show you care.
