

Adding to A Signed Note

Please see the documentation below for guides to choosing **Correct vs. Modify** when adding to a signed note

This workflow is to be used when accessing structured documentation is necessary. Example: MedStudent/Resident & Attending working a document together

- Double clicking on a note in Doc Viewer & PowerNote brings up the communication window
- Select **Correct**

Correct brings up the structured documentation format and allows all users to add/modify/delete documentation as if the note is being generated for the first time.
